Investor Pitch

A people-owned operating system for humanity

Muhammad Qureshi — Naib Imam, Jamia Masjid-e-Nabawi Qureshi Hashmi, G-11/4 Islamabad
AI researcher · author · founder

[Live demo: onepiecejourney-crew.netlify.app](https://onepiecejourney-crew.netlify.app)

Social media gave us a voice. NewDawn gives us the power to act.

One platform that connects people, communities, AI, transparent funding, voting, services and real-world problem-solving — owned by the people who use it.

1 · The Problem

- The world can **see** every injustice on social media — but can't **act**. Voice without power.
- Public money is untraceable; decisions are made without consent; a few control the many.
- Today's platforms extract ~30% and own your data, identity and attention.
- AI is concentrating power further — a fork in history with no people-owned alternative on the table.

2 · The Solution

A civic operating system: **Identity** → **Community** → **Discussion** → **Proposal** → **Vote** → **Fund** → **Execute** → **Verify** — with AI that explains and people who decide. Five pillars:

- Decentralized, bottom-up governance (society → city → country → global).
- Radical transparency — every public coin on an open ledger; citizens can veto.
- AI as a public utility that informs, never decides.
- A global science game turning 2B+ gamers into problem-solvers.
- Education that frees, and services (rides, food, business) with ~0% platform tax.

3 · Why Now

- AI makes a one-person-plus-AI company possible — proven by the founder building JARVIS + this platform.
- Blockchain makes transparent, tamper-proof public treasuries real and cheap (L2s).
- Global trust in institutions and Big Tech is collapsing — demand for a people-owned option is rising.

4 · Traction & Proof

Working demo	Full interactive platform live: onepiecejourney-crew.netlify.app
Content reach	9M+ organic views on the founder's Afkaar shorts channel; 3K+ subscribers
Execution proof	JARVIS — a real, open-source AI operating system, built solo with AI
Real community	The Medina-model community running physically at the founder's mosque
Live AI ambassador	A public JARVIS on the site that pitches and answers 24/7

5 · Product

Mobile feels like Facebook + Uber + Reddit + banking in one; desktop is a civic command center with a live world map. A personalized JARVIS lives inside both — explaining proposals, drafting them, matching services, and summarizing where every rupee went.

6 · Business Model (ethical, real)

- Small, transparent transaction fee on marketplace/services (far below the ~30% incumbents take).
- Optional premium tools for creators, agencies and community admins (analytics, automation, AI).
- Treasury infrastructure & verification-as-a-service for institutions/NGOs wanting transparent funds.
- No selling of user data. No fake engagement. Value comes from real activity, not surveillance.

7 · Market

- Intersects social (billions of users), the creator economy, fintech/wallets, civic-tech and DAOs.
- Beachhead: community organizations (mosques, churches, unions, neighborhoods, diasporas) that already pool funds and make decisions — starting in Pakistan, then the global Muslim community, then all.

8 · Roadmap & Use of Funds

Phase	Milestones	Timeline
Phase 1 (now)	Working demo + audience	DONE
Phase 2 (seed)	Real backend + auth, testnet treasury, marketplace, first pilots at partner communities	6–12 mo
Phase 3	L2 on-chain treasury, mobile apps, AI policy analysis, multi-community scale	12–24 mo
Phase 4	Global scale, science game, institutional/gov integrations	24 mo+

Seed funds go to: a small engineering team (frontend, backend, blockchain, AI), security audits, community pilots, and content that grows the movement.

9 · The Ask

We are raising a **seed round** to turn a proven demo + audience into a piloted, on-chain, multi-community product. We seek investors and a founding team who believe the next operating system for humanity should be owned by humanity.

Honest scope: today there is a working MVP/demo and strong organic traction — not a finished at-scale platform. That is exactly what this round builds.
